Time Limits

Inclusion Toolkit

What is it for?

Time limits refer to when a page sets a time limit on doing a certain action. This is often seen while filling in forms, or whilst making a purchase.

To make time limits accessible, Web Content Accessibility Guidelines (WCAG) 2.2 has a Level A rule. Users must be able to turn a time limit off, make it at least 10 times longer, or get a warning and 20 seconds to extend it.

Time limit considerations are most important for users with motor skills impairments, users with cognitive difficulties and screen reader users.

How to support it

Ensure that any time limits you use can be manually extended. Also ensure that the implementation of those time limits isn't done in a scary or anxiety-inducing manner.
